

McFadyenGroup
Pipeline Construction & Plant Hire

NO PROJECT IS TOO LARGE, TOO COMPLEX OR TOO ISOLATED FOR MCFADYEN GROUP

McFadyen Group is a privately owned civil works company. We hold a formidable reputation as private company leader in Queensland's pipeline construction industry. We are continually growing to meet ever expanding client needs, proving no project is too complex or too isolated not to be able to provide quality services.

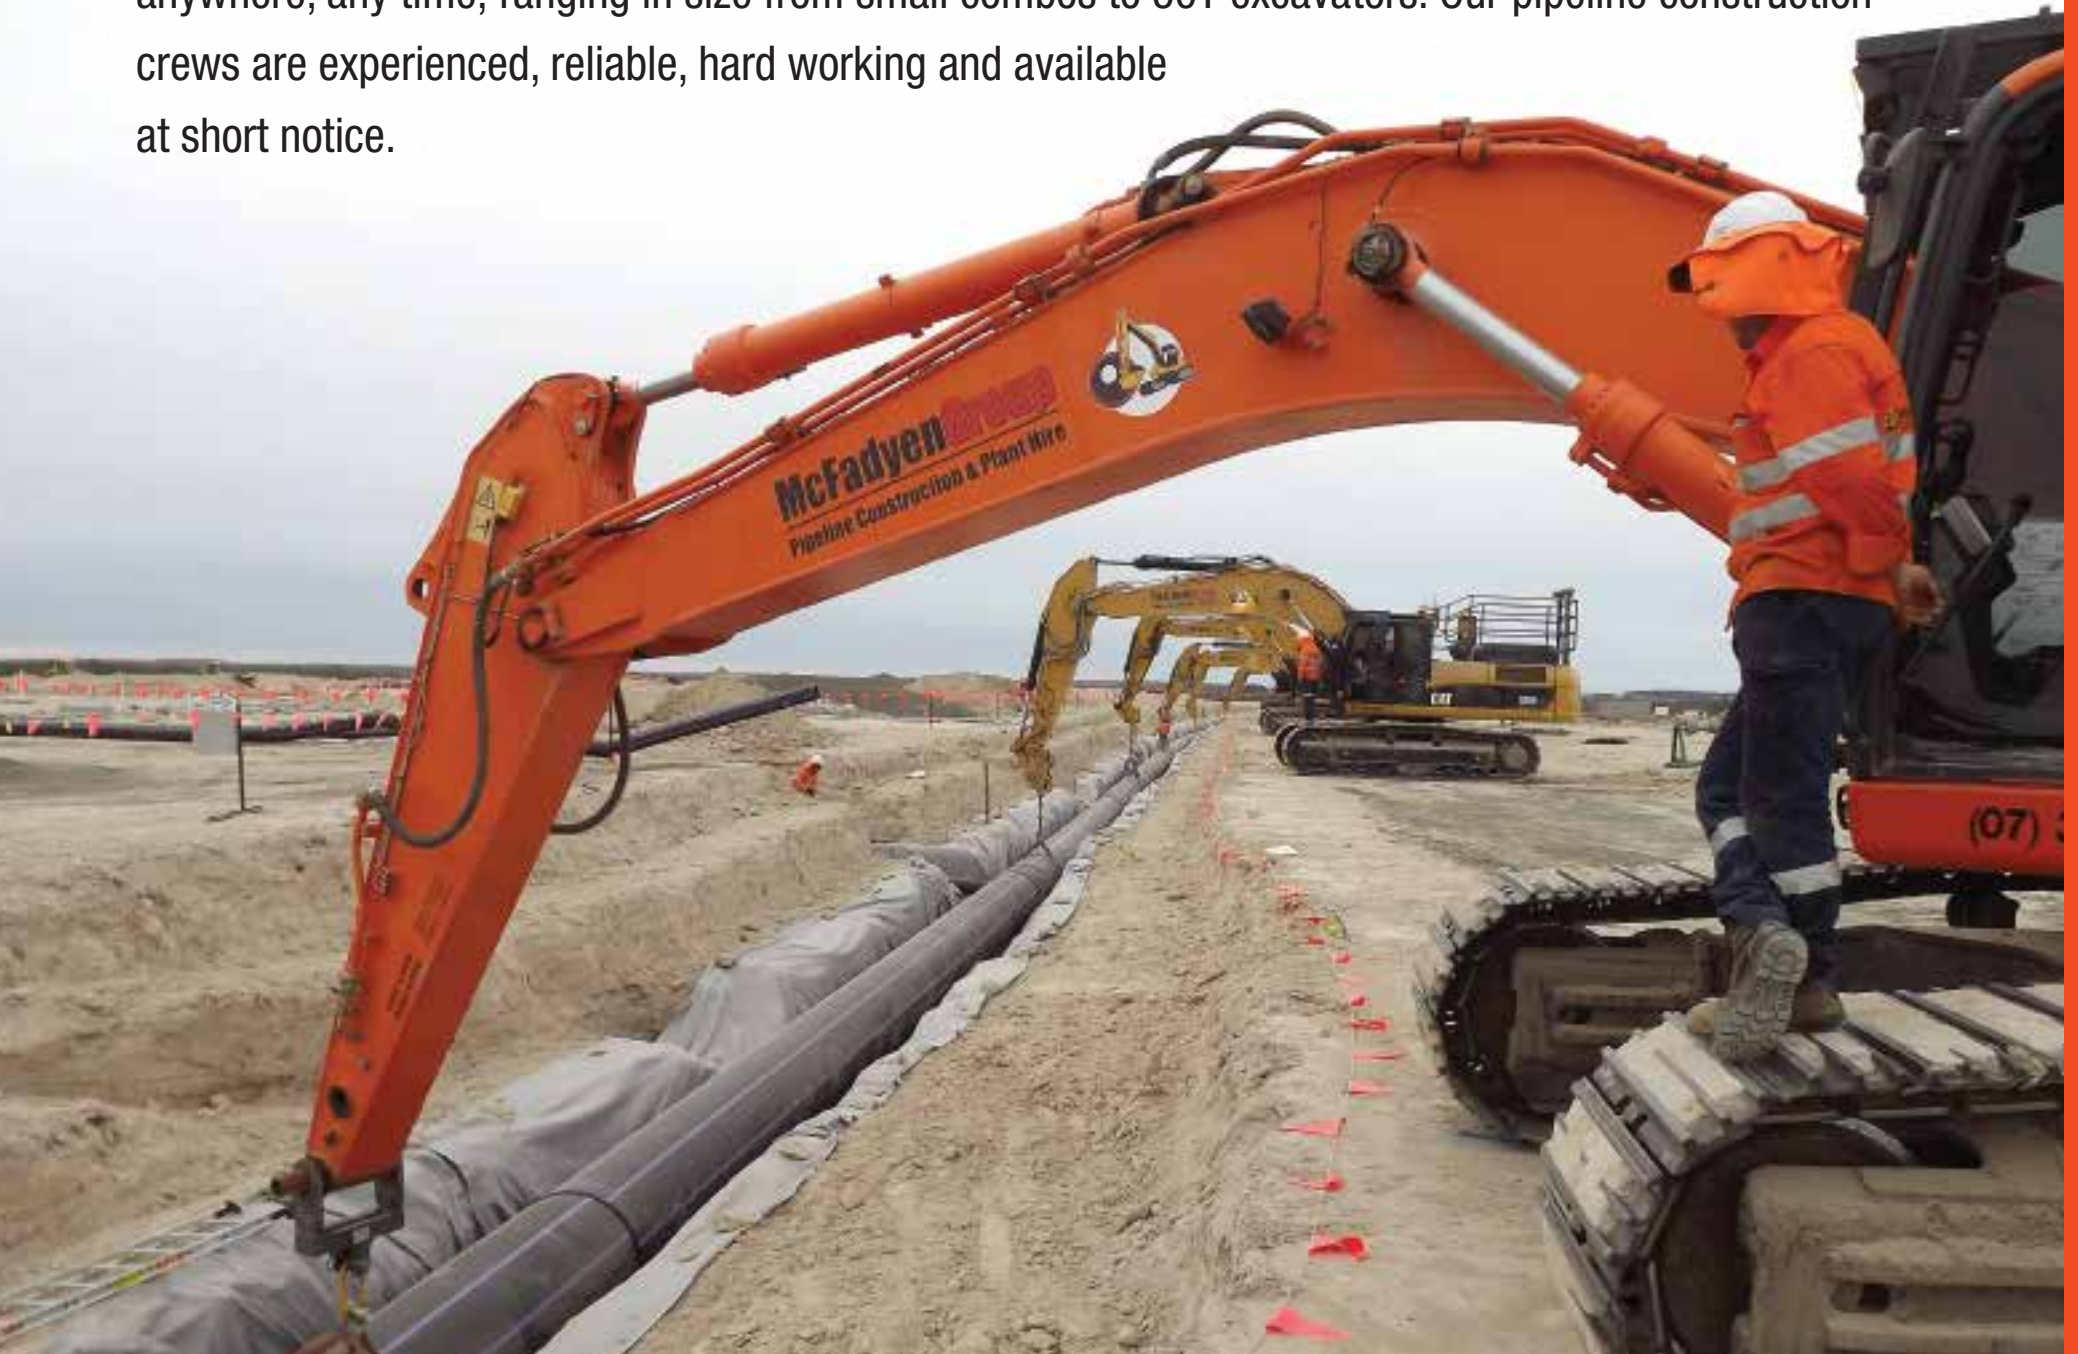

OUR COMPANY

OUR PEOPLE

McFadyen Group is a dynamic team of experienced work force that always achieves their Client's goals in successful project delivery and safety.

McFadyen Group's plant hire division provides a fleet of modern, reliable and well maintained plant anywhere, any time; ranging in size from small combos to 50T excavators. Our pipeline construction crews are experienced, reliable, hard working and available at short notice.

OUR SERVICES

OUR CAPABILITIES

We subcontract to well established large civil contractors or Government Departments, Local Authorities or developers with an uncompromising record of successful project delivery throughout Eastern Australia.

MFG have a number of experienced HDPE welding staff with testing necessary prior to commencing any new projects, such as recently required for Laing O'Rourke at Contabri North and Ostwalds at Eurombah Creek, both of which are Gas Processing Facilities (GPF's). MFG have already undertaken successful butt fusion and electro fusion welds at completed projects for Leightons (Waste Water Treatment Facility) and Laing O'Rourke (GPF) at Reedy Creek. To date all such welding has met Origin's very strict compliance standards with nil failures. MFG have completed welding SWMS and Testing Procedures for application to any project.

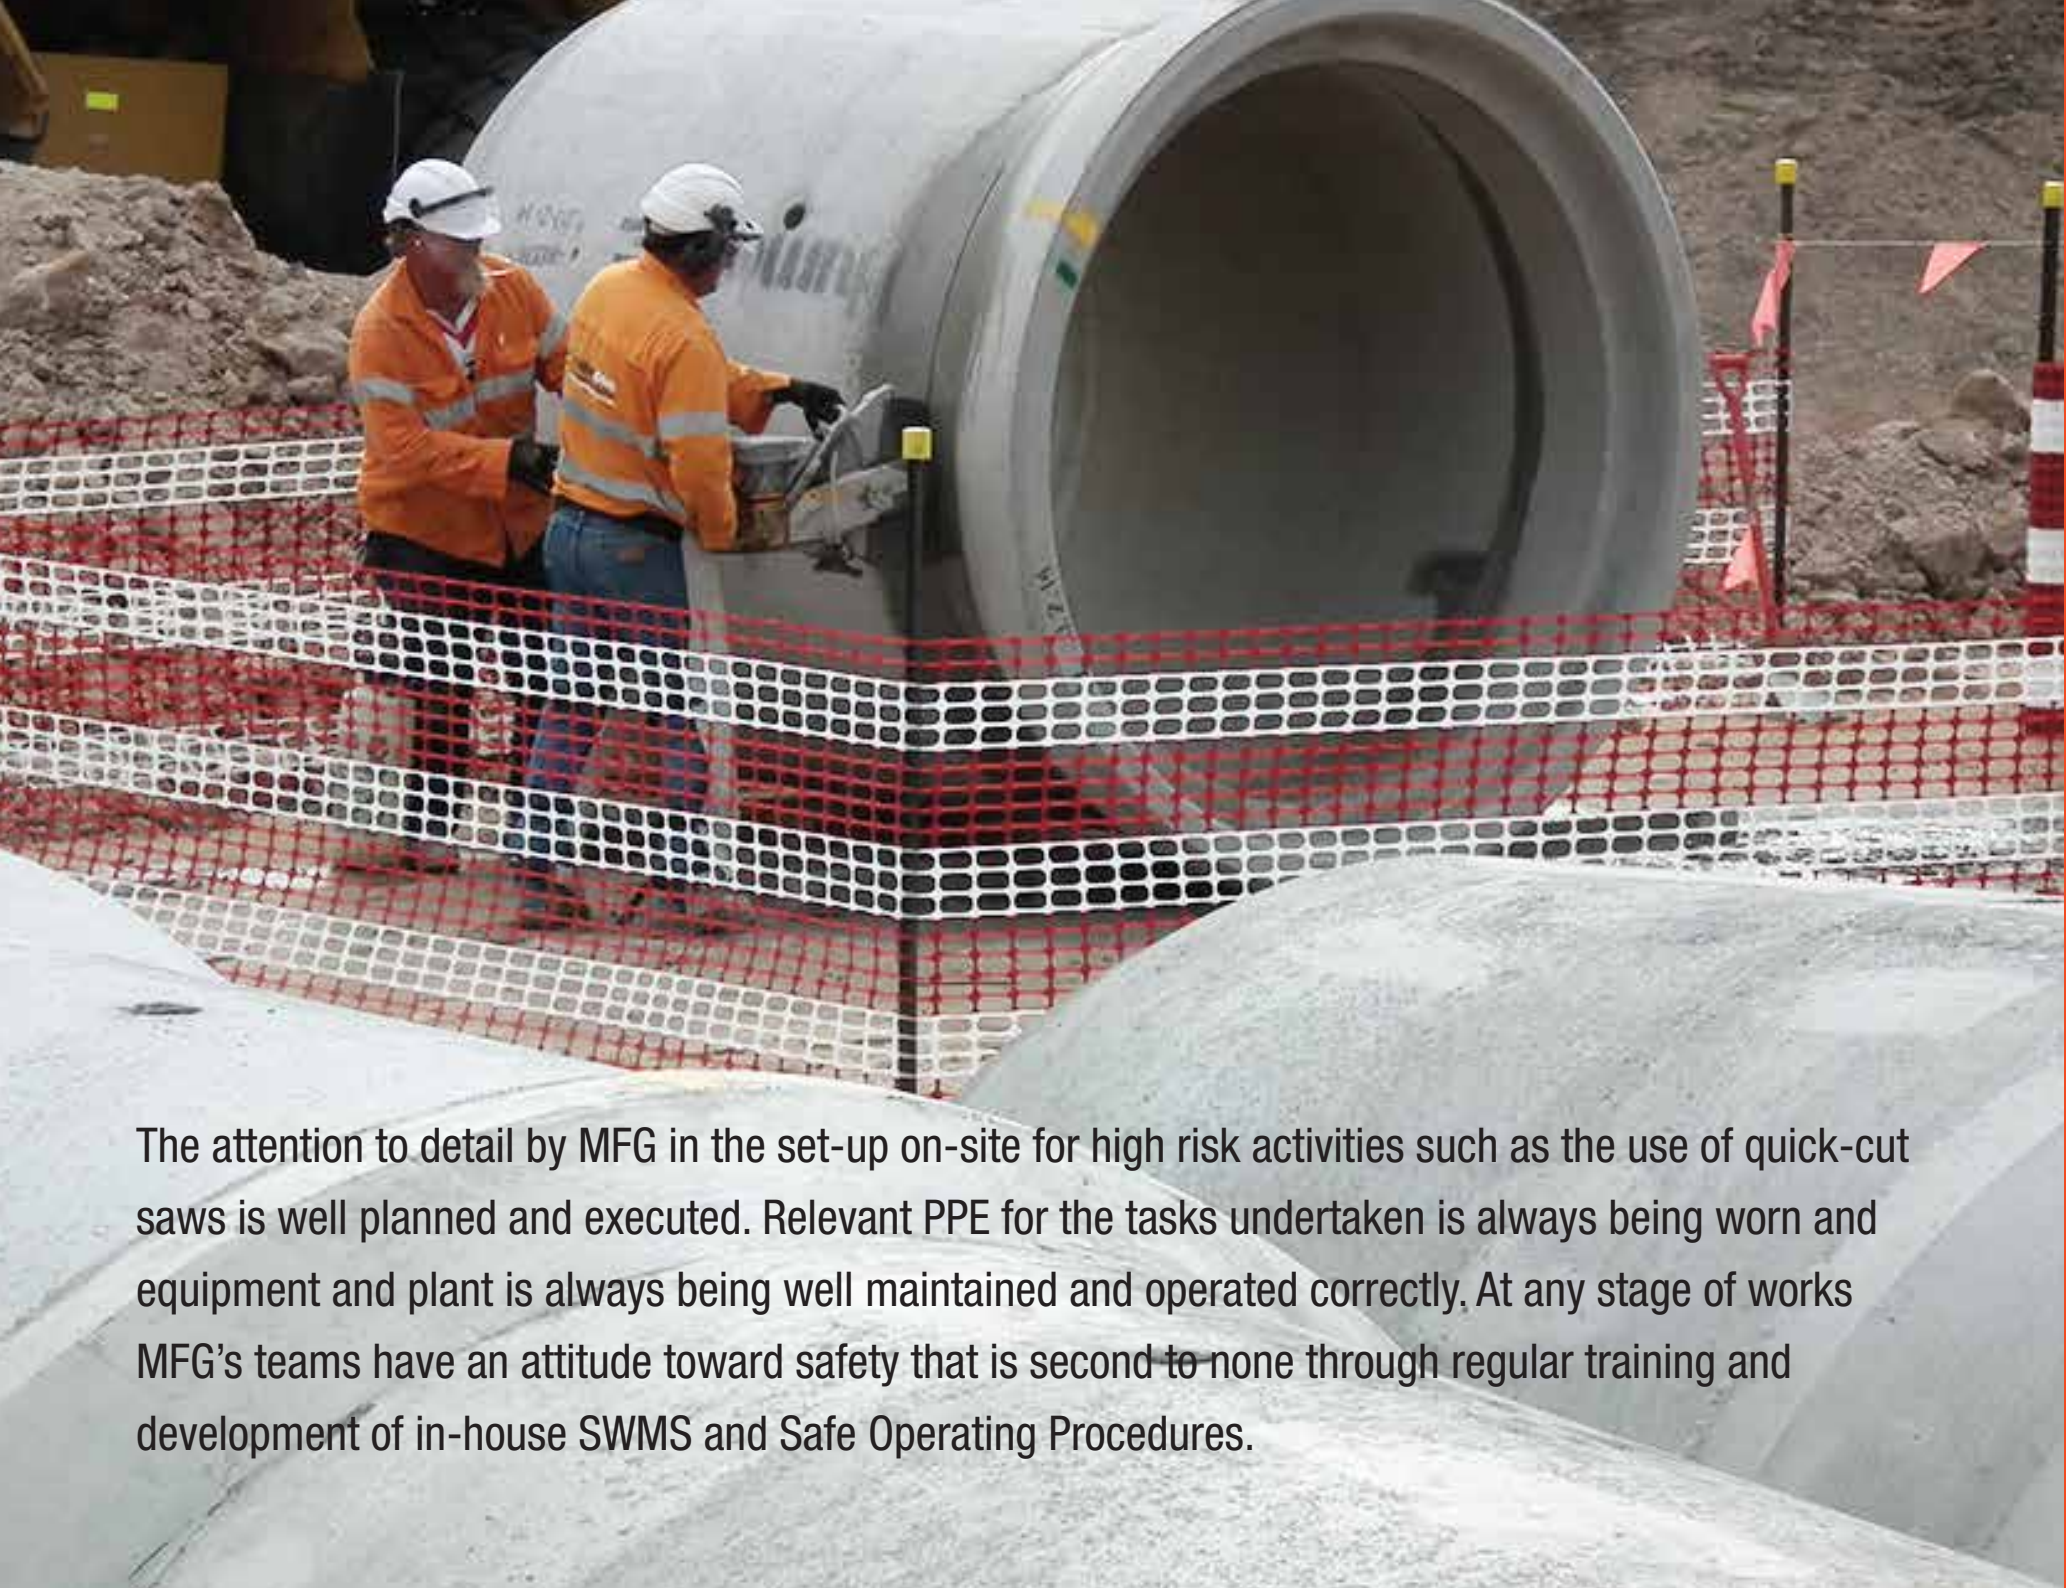

HDPE WELDING

Our philosophy encompasses an awareness and constant staff training of the importance of quality, safety and environment. Our project achievements are excellent in this regard.

OUR RESPONSIBILITY

OUR SAFETY

The attention to detail by MFG in the set-up on-site for high risk activities such as the use of quick-cut saws is well planned and executed. Relevant PPE for the tasks undertaken is always being worn and equipment and plant is always being well maintained and operated correctly. At any stage of works MFG's teams have an attitude toward safety that is second to none through regular training and development of in-house SWMS and Safe Operating Procedures.

McFadyen Group recognises that its reputation in the marketplace remains the keystone to its ongoing success. The development of long-lasting client relationships is the foundation of our achievements.
